

This week, we're looking into a new Snowflake feature, [EXECUTE IMMEDIATE FROM](#).

Take the following sql:

```
create table week72_employees (  
  employeeid int,  
  firstname string,  
  lastname string,  
  dateofbirth date,  
  position string  
);
```

Create an external stage to the following location:

```
s3://frostyfridaychallenges
```

Execute immediate from the command inside, and your data should look like:

	EMPLOYEEID	FIRSTNAME	LASTNAME	DATEOFBIRTH	POSITION
1	1	John	Doe	1985-07-24	Software Engineer
2	2	Jane	Smith	1990-04-12	Project Manager
3	3	Emily	Jones	1992-11-08	Graphic Designer
4	4	Michael	Brown	1988-01-15	System Administrator

Happy executing!
