

Coortex, Cortex, Cortex... all you hear about is Cortex, and we want to give you plenty of opportunity to use all the new Cortex functions here at FROSTY_FRIDAY()

And of course this is a basic challenge because... well, the point of Cortex is to make data science very, very easy!

This week, we'll be using the translate function. Below is your start up code:

```
CREATE OR REPLACE TABLE WEEK_87 AS
SELECT
  'Happy Easter' AS greeting,
  ARRAY_CONSTRUCT('DE', 'FR', 'IT', 'ES', 'PL', 'RO', 'JA', 'KO', 'PT') AS
language_codes
;
```

Your end result should look like the below:

	LANGUAGE_CODE	TRANSLATED_GREETING
1	DE	Frohe Ostern
2	FR	Joyeuse Pâques
3	IT	Felice Pasqua
4	ES	Feliz Semana Santa
5	PL	Szczęśliwa Wielkanoc
6	RO	Bucura Paște
7	JA	ハッピーイースター
8	KO	행복한 부활절
9	PT	Feliz Páscoa

Good luck!
