

Use **Snowflake Cortex** to translate and summarize international customer reviews in various languages. Analyze a single combined dataset (`customer_feedback_combined`) containing reviews in **English, Spanish, French, German, and Japanese**.

Run the following start up code:

Start Up Code

The result ought to look something like:

The image shows two side-by-side screenshots of a Snowflake Cortex interface. Both screenshots have a dark background and a light-colored header bar that reads "ENGLISH_SUMMARY". The left screenshot shows a single line of text: "The reviews are repetitive, but they can be summarized as". The right screenshot shows a more detailed summary: "The reviews are repetitive, but they can be summarized as follows: Some customers found the product to be 'okay' but felt it could be improved, with one customer specifically expressing dissatisfaction with the quality of the item. However, many customers praised the excellent customer support throughout the process. Several reviewers would definitely recommend the product, citing fast delivery and excellent service. Overall, the customer support was a highlight, with many customers appreciating the assistance they received."
