You might not have noticed that Snowflake released a sneaky new preview feature that lets you do file movement operation between Snowflake stages.

How?

You better find out.

Here's your start up code:

```
CREATE STAGE frosty_aws_stage
  URL = 's3://frostyfridaychallenges/';

LIST @FROSTY_AWS_STAGE/challenge_84/;

CREATE STAGE WEEK84;
```

You need to run a SQL command that will produce:

Good luck figuring it out!
