This week's focus centers around the primary point of interaction for Snowflake users—the login screen. As you engage with this challenge, consider the following tasks:

1. **Exclusive UI Access:** Ensure that individuals accessing the Snowflake account can only log in through the Snowflake UI, and other clients like SnowSQL are restricted.
2. **User_1 Authentication:** Configure User_1 to be permitted access solely through a username/password authentication method, disallowing SAML, OAuth, or Keypair.

Your objective is to navigate these tasks effectively by exploring and applying the appropriate commands. Good luck in mastering this week's challenge!
